## LMA-E01 User Guide

Rev. 1.1

## Beam angle selectors

(Only available for motorized illuminators, e.g., LA80 series) These buttons provide quadruple proportions of adjustable angles from the narrowest, 33%, 66%, to the widest. These angles vary with different models. When a beam angle is selected, you can use the fine-tune buttons below to tune for a desired effect.

After a preset beam angle is selected, use these buttons to fine-tune. T stands for tele, W for wide.
